Climate Neutral Continental Flight

On a typical continental flight in Europe, we emit about 868 kg of greenhouse gases per person. This includes the entire lifecycle of the plane and its fuel consumption. We calculated the emissions for a flight from Vienna to Madrid and back. We feel that's quite a typical distance for a flight in Europe. With 1.820 km, that's quite a substantial distance but still quite common. We have invested in Gold Standard Certified projects for you. These projects not only neutralize your emissions but also benefit the environment and communities. Stay safe, stay conscious, and clean it up like an Artist!
