Climate Neutral Living

In Europe, consumption-based emissions amount to 7,83 tons per person (EU-27, 2021). Consumption-based emissions encompass the greenhouse gases released due to the consumption of goods and services by end consumers, including both private households and public institutions. This includes emissions throughout the entire product lifecycle—production, transportation, use, and disposal—as well as emissions from imported goods. We have neutralized your personal emissions. We have invested in Gold Standard Certified climate positive projects for you. These projects not only neutralize your emissions but also benefit the environment and communities. Stay safe, stay conscious, and clean it up like an Artist!
