## Climate Neutral Intercontinental Flight

On a typical intercontinental flight, we emit the massive amount of 6.314 kg of greenhouse gases per person. This includes the entire lifecycle of the plane and its fuel consumption. We calculated the emissions for a flight from Vienna to San Francisco and back. We feel that's quite a typical distance. With 9.640 km, that's quite a substantial distance but still common. We have invested in Gold Standard Certified projects for you. These projects not only neutralize your emissions but also benefit the environment and communities. Stay safe, stay conscious, and clean it up like an Artist!
